# Addendum

# Heatrae Sadia HRU Eco 4 House/Apartment

### **Ecodesign**

As from 1 January 2016, ventilation equipment must meet certain European requirements for energy performance, which are set out in the Ecodesign Directive. This Ecodesign Directive consists of a set of minimum requirements with which energy-related products must comply. Energy labels show, in a simple and clear manner, the energy performance, efficiency and environmental friendliness of a product. The product must also be accompanied by a document containing technical details about its energy use.

# Recycling

In the manufacturing of this appliance durable materials were used. Make sure to dispose of this equipment responsibly at the end of its lifecycle. Ask the authorities for more information regarding this.

The appliance packaging is recyclable. Dispose of these materials in a responsible manner and in accordance with government regulations.

As a reminder of the need to dispose of household appliances separately, the product is marked with the symbol of a crossed-out wheeled dustbin. This means that at the end of its working life, the product must not be disposed of as urban waste. It must be taken to a special local authority differentiated waste collection centre or to a dealer providing this service.

Disposing of a household appliance separately avoids possible negative consequences for the environment and health deriving from inappropriate disposal and enables the constituent materials to be recovered to obtain significant savings in energy and resources.
