

- Insert the nozzle into the fitting and drip a small amount of lubricant onto the O-ring.
- Rotate the fitting to help spread the lubricant evenly over the O-ring.

Conex Bänninger Press Fitting Lubricant

Conex Bänninger press fitting lubricant is used to help ease tube insertion, ensuring that the tube does not dislodge the O-ring when it is being inserted.

The lubricant on a press fitting O-ring if stored or left outside of its packaging may lose some of its lubricity over time. It is therefore good practice in such

cases to add a small amount of lubricant to the O-ring.

Conex Bänninger press fitting lubricant can be used with all Conex Bänninger press fittings including >B< MaxiPro.

Conex Bänninger press fitting lubricant is non-hazardous. A safety data sheet is available at www.conexbanninger.com.
